#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of the term "rotational axis" appears to be improper since an axis is a theoretical concept and is not a tangible physical structure that would operate as claimed. Perhaps "axis" should be changed to –axle--, and the axle being rotatable about a rotational axis.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/757,991

Art Unit: 3676

Claims 1-6, 10, and 11 are rejected under 35 U.S.C. 102(b) as being 4. anticipated by Great Britain Patent Application GB 2392206 A (as discloses in applicant's IDS). A hinge unit comprising a case 12, a rotational axle 19 rotatably in an axial direction of the case, said rotational axle housed in the case and disposed slidably having two ends and a key portion 20 formed on an outer periphery surface thereof, a stopper 27 fixed to the case for receiving the rotational axis to pass therethrough, and having an engaging portion for engaging the key portion, a sub-cam 35 slidably inserted into one of the two ends of the rotational axis and rotating together with the rotational axis, first urging means 29 connected to the sub-cam and the stopper for applying a twisting force to the sub-cam and urging the sub-cam in a direction away from the stopper, a cap 32 fixed to the case for receiving the rotational axis to pass therethrough and for restricting a sliding movement of the sub-cam, fastener means 44 fixed the other of the two ends of the rotational axis and arranged to be slidable relative to the case, and second urging 41 means provided between the cap and the fastener means, said second urging means urging the fastener means in a direction away from the cap and pulling the rotational axis through the fastener means to engage the engaging portion with the key portion so that upon pressing the rotational axis in a direction against the second urging means, the engaging portion is released form the key portion.

Application/Control Number: 10/757,991 Page 4

Art Unit: 3676

#### Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Great Britain Patent Application GB 2392206 A ('206). Document '206 discloses the claimed invention except for the particular ranges claimed. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of '206 in this way, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233. Such a modification is not critical to the design and would have produced not unexpected results.

### Allowable Subject Matter

6. Claim 12 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach or fairly suggest a hinge structure wherein a damper means includes a housing having a substantially cylindrical shape and filled with viscous fluid, a rotor rotatably disposed in the housing and having wing portions, and dividing walls projecting from an inner periphery surface of the housing for forming a plurality of liquid chambers communicating with each other, as claimed.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark A. Williams whose telephone number is (571) 272-7064. The examiner can normally be reached on Monday through Friday.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
